

Unidocs is a leading paperless company and the strongest link in the transition from paper to electronic documents. Since it was established in 2000, it has provided professional and robust solutions and services such as PDF solution development, electronic document system service consulting and construction, electronic document data processing service and electronic document production solution. Unidocs develops application software based on PDF technology to pursue an environment in which electronic documents can be used in a variety of environments in a stable and flexible manner. Company products have passed the versatility test and have been adopted by the National Archives in Korea as the preservation format conversion software. As a global leader in mobile app development, Unidocs launched 'ezPDF Reader' in 2010 and sold more than 1.5 million worldwide. They have achieved remarkable results overseas and also strive to provide content services and platforms to help kids better use content in a better environment. Unidocs is expanding the domestic and overseas digital business based on their proprietary technology and pursuing various challenges to discover new value of electronic documents.
